CPS-Profil Rubber cork for exact creasing, against cracking liners and clean cutting edges

Lots of our customers we have showed the workwise of our special profils during practical trainings.

The invariably positive resonance has encouraged us the idea under most efficient aspects to the market-ready to lead.

Our special profiles supprot activ crease and combilines and take care of an exact folding. They reduce folding power, especially in the view of folding and gluing machines. In practice we reach better results than with profiles of B2, C3, A1, PHV und Cushion Crease.

Used along the cutting edges improves the cutting quality by reducing cracking liners.

Significantly is the reducing of creasing matrix by a equal or better folding result. This is a significant reduction of tension and nicks in the machine. The speed could be increased by a visually better product.

The Application:

CPS-1 for 15 mm plywood with single flutes, better folding
part No. 01

CPS-2 for 15 mm plywood with double flutes, better folding
part No. 02

CPS-3 for 12 mm plywood with double flutes, better folding and on 15 mm plywood on the cutting edges to improve the cutting quality.
part No. 03

CPS-4 for 12mm plywood to improve the cutting quality
part No. 04
